E-learning in Romania

 **Until 2000, Romania did not have a computerized educational system.**

 **SEI - Educational System**, is a complex project, initiated by the Romanian Ministry of National Education in 2001. It supports the process of teaching and learning activities in secondary education with IT technologies. It is developed and implemented between 2001 and 2019. At first, the teachers are trained.

SEI develops AEL that provides support in teaching activity. The platform contains a library of lessons and assessment tests organized by study subjects. Also, teachers can develop their own lessons and tests.

General characteristics

- ➔ **Friendly and flexible interface;**
- ➔ **Easy to install and manage;**
- ➔ **Multi-language support and regional**

 **Wikipedia platform**, where, using “Wikispaces” there may be created lessons, tests and presentations. For a good organization, the teachers can create groups that they manage. It is an effective communication in the study group.

 **Educational software** that are free and fee. They can be purchased online or in the booksellers.

There are educational software for all categories and age groups of students, including preschoolers.

These software are created by specialists in education, psychology, IT and other fields.

 **Edumoodle network .romania**

Conclusion:

Currently, as official study, 82% of teachers and 95% of students use the Internet and PC's for helping themselves for their lessons.
